

Women in Science and Engineering

The Arts & Sciences Libraries (ASL) permanent exhibit: **Women in Science and Engineering**, features photographs and biographies of famous women scientists. The exhibit, on display in the Science & Engineering Library (SEL), provides a visual statement to acknowledge the scientific and technical achievements of women. The current group of women featured in this revolving exhibit are:

Women have contributed richly to the achievements of science and engineering in the United States. As pointed out by the National Women's History Project, it is unfortunate that many of these accomplishments have been forgotten, ignored, and even hidden as a result of cultural and social norms. Recent years have seen great strides in recognizing the contributions of women in all disciplines and fields of study.

The National Women's History Project has been one of the organizations to lead the way. The *Women in Mathematics and Science* poster and *Outstanding Women in Math and Science* photographic series were produced by the National Women's History Project (<http://www.nwhp.org/>) in Windsor, California.

SEL has also acquired the poster set, *Inventive Women*, which features the accomplishments and patents of eleven women inventors. A portrait of the inventor, a brief description of her achievements, and a list of five other women inventors in the same field comprise each poster. These posters are complemented by a poster which provides a narrative of the history of women inventors. (This series was also produced by the National Women's History Project and partially funded by a grant from AT&T.)
